

Are you ready for changes required by U.S. Customs?

Government and securities regulations have increased the requirement on importers to provide a tightly integrated and audited supply chain. U.S. Customs has announced new information requirements which will be mandatory by early 2009. These requirements are commonly known as "10+2."

If not, problems will occur

Without integrated automation, the administrative burden on suppliers and importers will increase. Failure to comply will cause:

- Product delays awaiting required information. Starting in 2009 the product cannot load to the United States without this new required information.
- Increased Customs inspections due to incorrect information.
- Customs fines and penalties (**up to \$10,000 per incident**) due to incorrect information.
- **Loss of import status or C-TPAT certification** due to incomplete or incorrect information.

The answer is LOG-NET International Supplier Management

LOG-NET's cutting edge technology will enable you to comply with government requirements, improve your supply chain efficiency and provide importers and suppliers higher profit margins. Automated compliance of supplier management requirements:

- Provide a U.S. Customs "10+2" compliant platform for transacting
- Enable a platform of audited automation in international trade to support corporate compliance to trade and Sarbanes-Oxley requirements

Supplier Management Benefits

Lower Costs: Reduce inventory with electronic real time integration with our easy, low cost deployment.

Shorten Time-to-Market: Automatically create and load compliant standard documents in time for desired routing.

Communication: Improve supply chain communication, compliance and collaboration with LOG-NET's secure web-based application.

Visibility: LOG-NET Supplier Management allows visibility from the initial production through delivery.

LOG-NET International Supplier Management **automatically** generates **100%** of Customs required **10+2** information. Achieve efficient compliance through automation.

Supplier Management Capabilities

- Confirmation of all received and processed purchase orders
- Visibility from the production through delivery
- Request and create inspection certificates and payment requests
- Confirm product packing list and manifest

LOG-NET Application

- Access 24/7
- 12 new releases per year
- 10,000 users in over 70 countries
- On-demand, web-based application

Key link between buyer-supplier collaboration

Today, suppliers are a fundamental part of any successfully run supply chain. Businesses and their suppliers need an on-demand, flexible supplier management solution that lets them connect and coordinate successfully. LOG-NET Supplier Management allows businesses to consistently exceed the needs of their customers in all trade respects: delivery, quality, affordability, product support, and overall service.

LOG-NET Supplier Management provides complete insight into the supplier-to-buyer relationship, allowing direct communication and insight on a continuous basis to ensure the success of their suppliers, their division, and most importantly their customers.

The LOG-NET application provides a single supplier dashboard that allows the user to easily retrieve and verify all of the necessary supplier information.

LOG-NET supplier management allows the user to confirm and verify the receipt of the PO and to produce the quantity of product requested information in the time requested. It also allows the user to easily book additional details to forwarders with projected delivery details (*7-14 days prior to late ship date*).

The screenshot shows the LOG-NET application interface. At the top, there is a navigation bar with links for Order, Booking, Shipment, Container, Documentation, Freight Audit, Customs, Exception, Landed Cost, Reports, and Reference. Below this is a search bar and a table of search results. Annotations highlight several features: 'Simple Functions' points to a warning message; 'Click any column header to sort' points to the 'Order' column header; 'Easily see orders by status' points to the 'Status' column header; and 'Easily Select Many Styles to Process' points to the 'Material' column header.

Provides all Customs required information and more

LOG-NET Supplier Management provides all the Customs "10+2" requirements and much more:

Order Communication and Coordination

- Insure delivery of all new and changed orders promptly and efficiently to suppliers through e-mail and the internet.

Product status and WIP Monitoring

- Provide proactive and automated alerting of order and WIP milestones conveniently provided by suppliers through the web.

Automated Compliant Documentation

- Automatically generate Customs and trade compliant inspection certificates, packing lists and commercial invoices in a standard uniform format.
- Documents created with simple, single click functionality.

Policy Communication and Coordination

- Easily post shipping, quality, and production guidelines to central, user maintained web repositories.

Automated Alerting and Exceptions

- Monitor order, production, documentation, quality and shipping process on an exception basis.

Seamless Integration of Automated Documents to Support U.S. Customs Requirements and Payment Processing

- Automatically generates all of the Customs required 10+2 information.
- Simplify payment processing creating a win-win environment, reducing inventories while speeding document and product flow.
